

PRESS RELEASE

June, 2018

Latvian new entrepreneurs have created the first "ProjectEreum" decentralized business platform. The purpose of this platform and its tokens as a financial instrument is to connect great business ideas with investors around the world and give a breath to a number of new businesses and projects.

ProjectEreum is the place where you can invest your digital cryptocurrency in different parts of the world. The platform is unique in that every transaction is approved by a notary, thus ensuring transparent operation at every step. After the confirmed transaction, the token returns to the "ProjectEreum" platform, so the value of each transaction token grows. In order to take care of the durability of this phenomenon, the number of tokens is limited and there is no additional edition. It's now possible to buy one ProjectEreum token for one dollar.

Representative ProjectEreum reveals that, in his opinion, the world belongs to ambitious and creative people - the authors of ideas and their members. Most people are not able to fulfill their dreams and ideas under the influence of various circumstances, mainly due to lack of financial and knowledge. Similarly, the other side is successful people who no longer want to spend their time investing in new ideas, but rather choose to enjoy the rest of their lives and still think about their offspring and ways to improve the world. ProjectEreum is an innovative project with big ambitions, setting itself the goal of becoming the industry leader and offering investors various solutions. If you are interested in the world of cryptocurrency and investments, you can find more information at www.projectereum.com.
